

Lab 5 Write Up

Vishva Parmar

Question 1 & 2

Data visualization is good for exploratory data analysis, communication of results, and detection of outliers.

ggplot2 does not come installed into R.

#Question 3 & 4

Network graphs are typically not used to compare distributions of numeric variables. ggplot2 is not the only way to create plots in R

```
library(ggplot2)
ggplot(cars) +
  aes(x = speed, y = dist) +
  geom_point() +
  geom_smooth(method = "lm", se = FALSE) +
  labs(title = "Speed vs Stopping Distance",
        x = "Speed",
        y = "Stopping Distance") +
  theme_bw()
```

`geom\_smooth()` using formula = 'y ~ x'
